

For Release February 2010

Enco Industries' Green Giveback™ Partners With the National Forest Foundation

Plaistow, NH – Enco Industries is pleased to announce their valued partnership with the National Forest Foundation, a non-profit organization that strives for reforestation and the preservation of our natural woodlands.

One of Enco's main Eco-goals is to reduce their carbon footprint, otherwise known as the amount of carbon produced in a year's duration. Enco Industries commits to donate 1% of its profits to the NFF in efforts to plant trees and educate individuals on the importance of contributing to the sustainability of our environment.

Enco greatly values the concept of conducting green business and has established it to be a company wide Eco-Goal. As they join forces with the National Forest Foundation and continue to pursue their recycling programs, Enco takes another step closer to achieving a carbon neutral business.

About Enco Industries: Since Enco is a firm believer in protecting the environment with the implementation of this program, clients can contribute to their own sustainability initiatives by offsetting their carbon footprint by enrolling in Enco's Green Giveback.

We encourage you to partner with Enco and NFF and achieve your own Eco-Goals too. To learn more, please visit www.EncoGreenGiveback.com.
